

Research mapping on Covid-19: new interactive data visualizations

This is the first issue of our weekly digest, presenting different types of data visualizations of randomized controlled trials (RCTs) evaluating preventive and treatment interventions for Covid-19, as registered in the WHO International Clinical Trials Registry Platform ([ICTRP](#)).

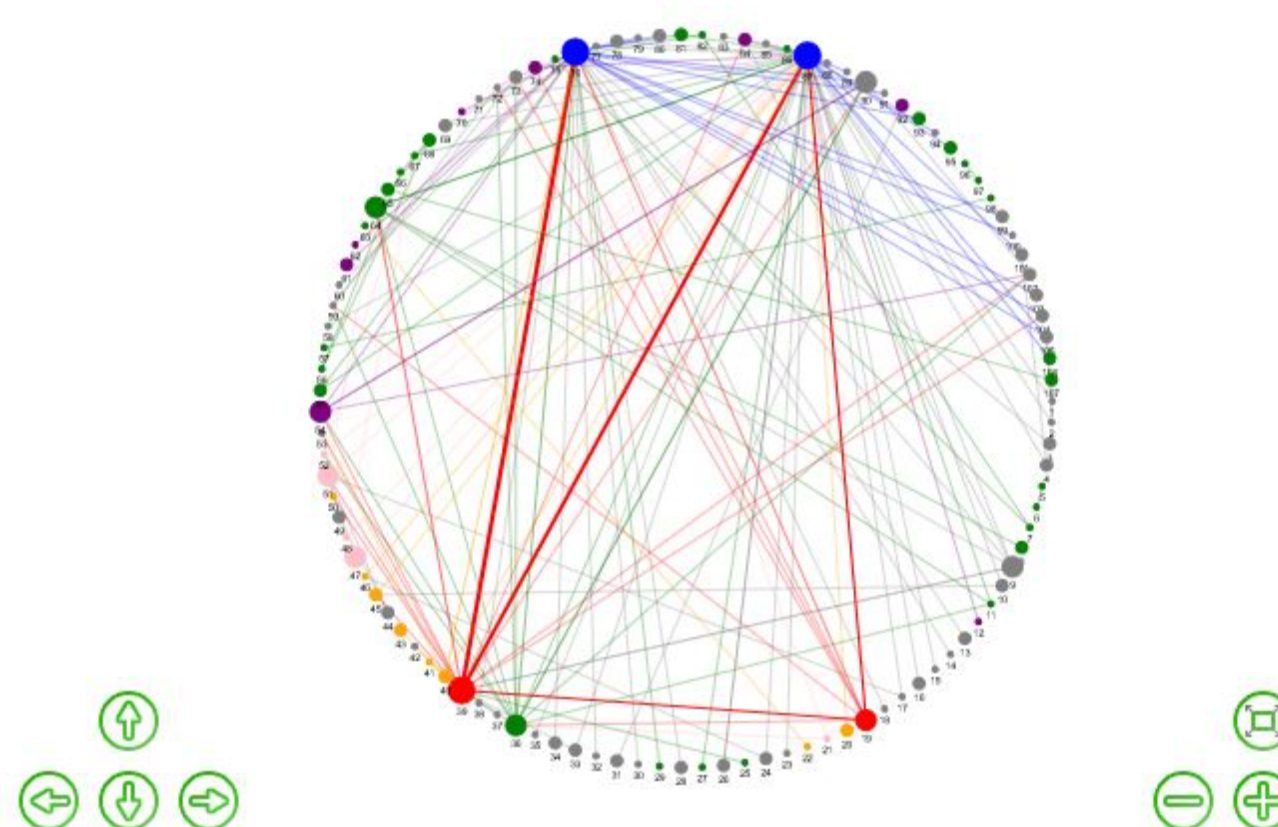

This content is part of the living mapping of ongoing research performed by the [Covid-NMA initiative](#). Graphs, diagrams and tables are updated once a week.

Explore clinical trial data

An interactive dashboard allows you to explore the trials according to their location, the treatments they are studying, their registration date ...

Network diagrams of pharmacological treatments

We have created diagrams that describe the network of studies evaluating pharmacologic treatments.

You can explore different treatment comparisons by selecting the treatment of interest in 3 different graphs.

Treatment mapping

This mapping, based on textual data mining of the metadata of these trials, shows all the avenues explored by current and past clinical trials, the combinations of treatments, their main categories and the expected or observed results.
